

Musical Instruments Cleaning Protocol During Covid-19

- There is a 4-day isolation rule applied to all instruments that are returned to the Library during Covid-19.
- After the 4-day isolation period, all instruments are then cleaned and disinfected using isopropyl alcohol above 70%.
- Fretboards, frets, strings, stringed instruments, plastic/metal finishes, guitars, accordions, brass and woodwind mouthpieces are all thoroughly cleaned and disinfected using isopropyl alcohol.
- Piano keys / keyed instruments are first cleaned with soap and water before a final sterilisation using a laboratory tested UVC Lamp.
- For your safety we use a **Three Step Cleaning Process** to ensure our instruments are safe to use during Covid 19:
 1. Four-Day Isolation Rule
 2. Instruments are cleaned and disinfected
 3. Instruments are finally sterilised using a laboratory tested UVC germicidal lamp.
